Vaccination

The Vaccination Dashboard provides information regarding the State's vaccination efforts.

The set of dashboards below is designed to provide an overview of the current and past state of COVID-19 in New Hampshire. Click between tabs to learn more about each dashboard. Users can also download raw CSV files of the data behind each visualization by clicking the download icon associated with each chart.

OVERVIEW	TESTING	TRENDS	MAPS
EQUITY	SCHOOLS	HOSPITALS	CASE SUMMARY

Vaccine Operational Dashboard

1,550,652	48,882	762,959	840,976	54.4%	59.8%
Total Vaccine Doses Administered	Total Doses Administered to Non-NH Residents	Total Individuals Fully Vaccinated	Total Individuals with at least 1 Dose	Percent of NH Residents Fully Vaccinated	Percent of NH Residents with at least 1 Dose

Select a Metric - The charts below do not include data from Federal Vaccine Program

Total Individuals Fully Vaccinated

Show As: Count of Total Individuals

Show By: Age Group

Over Time By: Cumulative

Geographically By: County with Manchester and Nashua

Low to High

Data as of: 10/1/2021

Why are some data points not shown?

There are several circumstances where specific data cannot be shown on the dashboards. In each case, the reason is explained on the dashboard. New Hampshire's general suppression principles are described below.

- "Data Suppressed": The dashboards contain extremely detailed and granular information. In some circumstances, data becomes so granular that data is suppressed when numbers are small to protect the privacy of the underlying individuals.
- "Data Not Reported": In addition to data suppression, certain sub-divisions of the data are simply not reported as a matter of policy (for example, data for towns with populations of less than 100) to further protect the privacy of individuals.
- "Rate Not Reliable": When calculating rates (for example, the percentage of the population tested) there are circumstances where the data become so small that they are likely to lack statistical significance when making comparisons. Data may be suppressed in these circumstances to avoid misrepresenting population level trends.

Why don't all metrics match exactly between dashboards and between days when the dashboard is viewed?

New Hampshire's goal is to provide accurate and up-to-date information as quickly as possible. This can lead to circumstances where information is available in some contexts, but not others. For example, only partial demographic information may be available for some cases at a particular point in time. However, this type of information is continuously being updated as new information becomes available through ongoing public health case investigation and outreach. Explanations are provided within the dashboards when these circumstances arise. Additionally, data fixes and improvements may lead to certain previously displayed data to be updated with more accurate or complete information.
